

## Spruce-Rhododendron Soil

### Soils

#### Description

Kekkilä Spruce-Rhododendron Soil is the definitive special soil for plants that grow in acid soils. It is an excellent complete substrate for coniferous trees and bushes, rhododendrons, azaleas, hydrangeas, blueberries, and all plants that prefer a slightly acid soil.

Kekkilä Spruce-Rhododendron Soil contains dark peat, composted bark, and fine and medium sand. It is rich in humus, highly moisture-retentive and contains just the right amount of lime and fertilisers for evergreens and acid soil plants.

#### Instructions

Use Kekkilä Spruce-Rhododendron Soil for planting seedlings (1 sack / bush, 3 sacks / tree) and fertilise with Kekkilä Spruce-Rhododendron Nutrients. If you plant in spring, start fertiliser treatments within about one month. If you plant in autumn, start fertiliser treatments the following summer.

Use immediately if possible, or store cold away from light. Nutrient loss occurs due to the influence of time, temperature and humidity.

#### Recommended usage

- rhododendrons
- hydrangeas
- highbush blueberries
- coniferous trees
- coniferous bushes
- azaleas
- mahonias
- European wild ginger
